Delivering Effective Health Care for All

New evidence from COMDIS, CREHS and TARGETS Research Programme Consortia

Please join us for a special event to discuss key findings from DFID-funded research on the following themes:

Engaging service providers Service delivery and the monitoring and evaluation of public, private and community-based health provision

- Monitoring health provider performance
- Cost effectiveness and sustainability of delivery mechanisms
- Integrated programmes for the control of communicable diseases

Reducing barriers to access Addressing the social, financial and supply-side barriers to health care

- Social messaging to improve health seeking behaviour
- Retaining health workers in rural areas
- Protecting the poor against the catastrophic costs of care

Scaling up health services and policies Working with policy makers and programmes to implement change

- Promoting evidence-based health policies and programmes
- Overcoming the challenges of health policy implementation
- The role of public-private partnerships in delivering services

COMDIS is coordinated by the Nuffield Centre at the University of Leeds. It focuses on research and development for effective communicable disease control.

The Consortium for Research on Equitable Health Systems (CREHS), coordinated by LSHTM, aims to generate new knowledge about how to strengthen health systems policies and interventions in ways that benefit poor and marginalised groups.

TARGETS is also coordinated by LSHTM. It brings together partners in India, Africa and Europe to develop new knowledge and tools for the control of communicable diseases.

**Promoting dialogue
and debate**

TARGETS
Team for Applied Research: Generating Effective Tools
and Strategies for Communicable Disease Control
